## Nucleoside phosphorylase (PNP) (NM\_000270) Human Tagged Lenti ORF Clone

**Product data:** 

**Product Type:** Expression Plasmids

Product Name: Nucleoside phosphorylase (PNP) (NM 000270) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: Nucleoside phosphorylase

Synonyms: NP; PRO1837; PUNP

Mammalian Cell

Selection:

Puromycin

**Vector:** pLenti-C-Myc-DDK-P2A-Puro (PS100092)

**E. coli Selection:** Chloramphenicol (34 ug/mL)

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC210759).

Sequence:

**Restriction Sites:** Sgfl-Mlul

**Cloning Scheme:** 

st The last codon before the Stop codon of the ORF.

**ACCN:** NM\_000270

ORF Size: 867 bp

## Nucleoside phosphorylase (PNP) (NM\_000270) Human Tagged Lenti ORF Clone - RC210759L3

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 000270.1</u>

**RefSeq Size:** 2438 bp

RefSeq ORF: 870 bp

**Locus ID:** 4860

 UniProt ID:
 P00491

 Cytogenetics:
 14q11.2

Domains: Mtap PNP

**Protein Families:** Druggable Genome, Stem cell - Pluripotency

Protein Pathways: Metabolic pathways, Nicotinate and nicotinamide metabolism, Purine metabolism, Pyrimidine

metabolism

MW: 32.1 kDa

**Gene Summary:** This gene encodes an enzyme which reversibly catalyzes the phosphorolysis of purine

nucleosides. The enzyme is trimeric, containing three identical subunits. Mutations which result in nucleoside phosphorylase deficiency result in defective T-cell (cell-mediated) immunity but can also affect B-cell immunity and antibody responses. Neurologic disorders may also be apparent in patients with immune defects. A known polymorphism at aa position

51 that does not affect enzyme activity has been described. A pseudogene has been

identified on chromosome 2. [provided by RefSeq, Jul 2008]
