### DNA Polymerase beta (POLB) (NM\_002690) Human Tagged Lenti ORF Clone

**Product data:** 

**Product Type:** Expression Plasmids

Product Name: DNA Polymerase beta (POLB) (NM\_002690) Human Tagged Lenti ORF Clone

Tag: mGFP

Symbol: DNA Polymerase beta

Mammalian Cell Puromycin

Selection:

Vector:

pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide

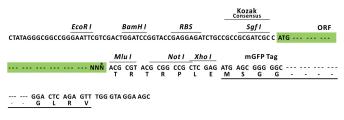

The ORF insert of this clone is exactly the same as(RC210765).

Sequence:

**Restriction Sites:** Sgfl-Mlul

**Cloning Scheme:** 

<sup>\*</sup> The last codon before the Stop codon of the ORF.

**ACCN:** NM\_002690 **ORF Size:** 1005 bp

#### DNA Polymerase beta (POLB) (NM\_002690) Human Tagged Lenti ORF Clone - RC210765L4

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

**RefSeq:** <u>NM 002690.1</u>

RefSeq Size: 1259 bp RefSeq ORF: 1008 bp

**Locus ID:** 5423

 UniProt ID:
 P06746

 Cytogenetics:
 8p11.21

**Domains:** POLXc, HhH1

Protein Families: Druggable Genome
Protein Pathways: Base excision repair

MW: 38 kDa

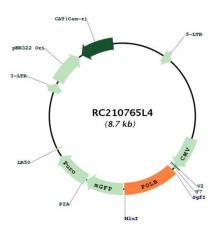

**Gene Summary:** The protein encoded by this gene is a DNA polymerase involved in base excision and repair,

also called gap-filling DNA synthesis. The encoded protein, acting as a monomer, is normally found in the cytoplasm, but it translocates to the nucleus upon DNA damage. Several transcript variants of this gene exist, but the full-length nature of only one has been

described to date. [provided by RefSeq, Sep 2011]
