

Product datasheet for RC210779

ITGB1BP3 (NMRK2) (NM_170678) Human Tagged ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: ITGB1BP3 (NMRK2) (NM_170678) Human Tagged ORF Clone

Tag: Myc-DDK
Symbol: ITGB1BP3

Synonyms: ITGB1BP3; MIBP; NRK2

Mammalian Cell Neomycin

Selection:

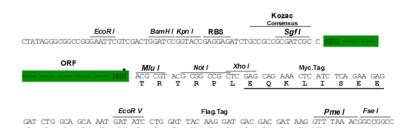

Vector:pCMV6-Entry (PS100001)E. coli Selection:Kanamycin (25 ug/mL)

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

Cloning sites used for ORF Shuttling:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_170678

ORF Size: 690 bp

OriGene Technologies, Inc. 9620 Medical Center Drive, Ste 200

OTI Disclaimer:

Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at customercom or by calling 301.340.3188 option 3 for pricing and delivery.

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>

OTI Annotation:

This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.

Components:

Note:

MW:

The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method:

- 1. Centrifuge at 5,000xg for 5min.
- 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
- 3. Close the tube and incubate for 10 minutes at room temperature.
- 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.
- 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of
- shipping when stored at -20°C.

 Plasmids are not sterile. For experiments where strict sterility is required, filtration with

0.22um filter is required.

26 kDa

RefSeq: <u>NM 170678.2</u>

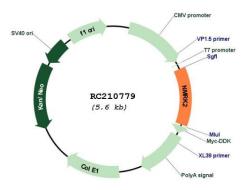

RefSeq Size: 1142 bp
RefSeq ORF: 693 bp
Locus ID: 27231
UniProt ID: Q9NPI5
Cytogenetics: 19p13.3

Gene Summary:

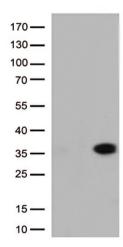

Catalyzes the phosphorylation of nicotinamide riboside (NR) and nicotinic acid riboside (NaR) to form nicotinamide mononucleotide (NMN) and nicotinic acid mononucleotide (NaMN). Reduces laminin matrix deposition and cell adhesion to laminin, but not to fibronectin. Involved in the regulation of PXN at the protein level and of PXN tyrosine phosphorylation. May play a role in the regulation of terminal myogenesis.[UniProtKB/Swiss-Prot Function]

Circular map for RC210779

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY ITGB1BP3 (Cat# RC210779, Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-ITGB1BP3 (Cat# [TA813058])(1:2000).
