

Product datasheet for RC210818L2V

LIF (NM_002309) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles Product Name: LIF (NM_002309) Human Tagged ORF Clone Lentiviral Particle Symbol: LIF CDF; DIA; HILDA; MLPLI Synonyms: **Mammalian Cell** None Selection: Vector: pLenti-C-mGFP (PS100071) mGFP Tag: NM 002309 ACCN: ORF Size: 606 bp The ORF insert of this clone is exactly the same as(RC210818). **ORF** Nucleotide Sequence: The molecular sequence of this clone aligns with the gene accession number as a point of **OTI Disclaimer:** reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info **OTI** Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene. **RefSeq:** NM 002309.2 **RefSeq Size:** 3987 bp **RefSeq ORF:** 609 bp Locus ID: 3976 **UniProt ID:** P15018 Cytogenetics: 22q12.2 **Protein Families:** Adult stem cells, Druggable Genome, ES Cell Differentiation/IPS, Secreted Protein **Protein Pathways:** Cytokine-cytokine receptor interaction, Jak-STAT signaling pathway

	LIF (NM_002309) Human Tagged ORF Clone Lentiviral Particle – RC210818L2V
MW:	22 kDa
Gene Summary:	The protein encoded by this gene is a pleiotropic cytokine with roles in several different systems. It is involved in the induction of hematopoietic differentiation in normal and myeloid leukemia cells, induction of neuronal cell differentiation, regulator of mesenchymal to epithelial conversion during kidney development, and may also have a role in immune tolerance at the maternal-fetal interface. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene. [provided by RefSeq, Mar 2012]
