Gene Summary:This gene encodes a member of the acyl-CoA thioesterase family which catalyse the
conversion of activated fatty acids to the corresponding non-esterified fatty acid and
coenzyme A. Expression of a mouse homolog in brown adipose tissue is induced by low
temperatures and repressed by warm temperatures. Higher levels of expression of the
mouse homolog has been found in obesity-resistant mice compared with obesity-prone mice,
suggesting a role of acyl-CoA thioesterase 11 in obesity. Alternative splicing results in
transcript variants. [provided by RefSeq, Nov 2010]
