DORFIN (RNF19A) (NM 183419) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: DORFIN (RNF19A) (NM_183419) Human Tagged ORF Clone Lentiviral Particle

Symbol: DORFIN Synonyms: RNF19

Mammalian Cell Puromycin

Selection:

Vector:

pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

ACCN: NM_183419 **ORF Size:** 2514 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC210887).

•

Sequence:

OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeg: NM 183419.1

 RefSeq Size:
 4366 bp

 RefSeq ORF:
 2517 bp

 Locus ID:
 25897

 UniProt ID:
 Q9NV58

 Cytogenetics:
 8q22.2

Protein Families: Druggable Genome, Transcription Factors, Transmembrane

MW: 90.5 kDa

Gene Summary:

This gene encodes a member of the ring between ring fingers (RBR) protein family, and the encoded protein contains two RING-finger motifs and an in between RING fingers motif. This protein is an E3 ubiquitin ligase that is localized to Lewy bodies, and ubiquitylates synphilin-1, which is an interacting protein of alpha synuclein in neurons. The encoded protein may be involved in amyotrophic lateral sclerosis and Parkinson's disease. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Jul 2013]
