# Product datasheet for RC210910L3

#### PKC theta (PRKCQ) (NM\_006257) Human Tagged Lenti ORF Clone

## **Product data:**

Product Type:	Expression Plasmids
Product Name:	PKC theta (PRKCQ) (NM_006257) Human Tagged Lenti ORF Clone
Tag:	Myc-DDK
Symbol:	PKC theta
Synonyms:	nPKC-theta; PRKCT
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-Myc-DDK-P2A-Puro (PS100092)
E. coli Selection:	Chloramphenicol (34 ug/mL)
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC210910).
<b>Restriction Sites:</b>	Sgfl-Mlul
Cloning Scheme:	
	Cloning sites used for ORF Shuttling:

---- GCG ATC GC ATG ---- //--- NNN ACG CGT ----

ACCN: ORF Size: NM\_006257 2118 bp

<b>ORIGENE</b> PKC t	heta (PRKCQ) (NM_006257) Human Tagged Lenti ORF Clone – RC210910L3
OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method	<ol> <li>Centrifuge at 5,000xg for 5min.</li> <li>Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>Close the tube and incubate for 10 minutes at room temperature.</li> <li>Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ol>
RefSeq:	<u>NM 006257.2</u>
RefSeq Size:	3273 bp
RefSeq ORF:	2121 bp
Locus ID:	5588
UniProt ID:	<u>Q04759</u>
Cytogenetics:	10p15.1
Domains:	pkinase, S_TK_X, DAG_PE-bind
Protein Families:	Druggable Genome, Protein Kinase, Transcription Factors
Protein Pathways:	Adipocytokine signaling pathway, T cell receptor signaling pathway, Tight junction, Vascular smooth muscle contraction
MW:	81.7 kDa

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

#### Science PKC theta (PRKCQ) (NM\_006257) Human Tagged Lenti ORF Clone – RC210910L3

Gene Summary:Protein kinase C (PKC) is a family of serine- and threonine-specific protein kinases that can be<br/>activated by calcium and the second messenger diacylglycerol. PKC family members<br/>phosphorylate a wide variety of protein targets and are known to be involved in diverse<br/>cellular signaling pathways. PKC family members also serve as major receptors for phorbol<br/>esters, a class of tumor promoters. Each member of the PKC family has a specific expression<br/>profile and is believed to play a distinct role. The protein encoded by this gene is one of the<br/>PKC family members. It is a calcium-independent and phospholipid-dependent protein<br/>kinase. This kinase is important for T-cell activation. It is required for the activation of the<br/>transcription factors NF-kappaB and AP-1, and may link the T cell receptor (TCR) signaling<br/>complex to the activation of the transcription factors. [provided by RefSeq, Jul 2008]
