## Axin 2 (AXIN2) (NM\_004655) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** Axin 2 (AXIN2) (NM\_004655) Human Tagged ORF Clone Lentiviral Particle

Symbol: Axin 2

Synonyms: AXIL; ODCRCS

Mammalian Cell

Selection:

Puromycin

**Vector:** pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

**ACCN:** NM\_004655 **ORF Size:** 2529 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC210931).

Sequence:

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 004655.2

 RefSeq Size:
 4241 bp

 RefSeq ORF:
 2532 bp

 Locus ID:
 8313

 UniProt ID:
 Q9Y2T1

 Cytogenetics:
 17q24.1

**Domains:** RGS, DAX

**Protein Families:** Druggable Genome, ES Cell Differentiation/IPS, Induced pluripotent stem cells

**Protein Pathways:** Basal cell carcinoma, Colorectal cancer, Endometrial cancer, Pathways in cancer, Wnt

signaling pathway

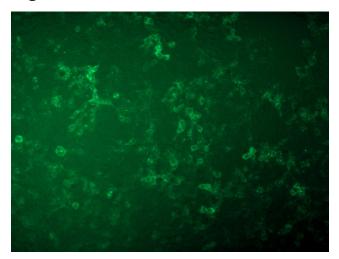

**MW:** 93.6 kDa

**Gene Summary:** The Axin-related protein, Axin2, presumably plays an important role in the regulation of the

stability of beta-catenin in the Wnt signaling pathway, like its rodent homologs, mouse conductin/rat axil. In mouse, conductin organizes a multiprotein complex of APC (adenomatous polyposis of the colon), beta-catenin, glycogen synthase kinase 3-beta, and conductin, which leads to the degradation of beta-catenin. Apparently, the deregulation of beta-catenin is an important event in the genesis of a number of malignancies. The AXIN2 gene has been mapped to 17q23-q24, a region that shows frequent loss of heterozygosity in breast cancer, neuroblastoma, and other tumors. Mutations in this gene have been associated with colorectal cancer with defective mismatch repair. [provided by RefSeq, Jul

2008]

## **Product images:**

[RC210931L4] was used to prepare Lentiviral particles using [TR30037] packaging kit. HEK293T cells were transduced with RC210931L4V particle to overexpress human AXIN2-mGFP fusion protein.
