## EP4 (PTGER4) (NM\_000958) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** EP4 (PTGER4) (NM\_000958) Human Tagged ORF Clone Lentiviral Particle

Symbol: PTGER4
Synonyms: EP4; EP4R

Mammalian Cell

Puromycin

Selection:

Vector:

pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

**ACCN:** NM\_000958 **ORF Size:** 1464 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC210932).

Sequence:

**Domains:** 

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 000958.2

 RefSeq Size:
 3432 bp

 RefSeq ORF:
 1467 bp

 Locus ID:
 5734

 UniProt ID:
 P35408

 Cytogenetics:
 5p13.1

**Protein Families:** Druggable Genome, GPCR, Transmembrane

7tm 1

**Protein Pathways:** Neuroactive ligand-receptor interaction

MW: 53.1 kDa

**Gene Summary:** The protein encoded by this gene is a member of the G-protein coupled receptor family. This

protein is one of four receptors identified for prostaglandin E2 (PGE2). This receptor can activate T-cell factor signaling. It has been shown to mediate PGE2 induced expression of early growth response 1 (EGR1), regulate the level and stability of cyclooxygenase-2 mRNA, and lead to the phosphorylation of glycogen synthase kinase-3. Knockout studies in mice suggest that this receptor may be involved in the neonatal adaptation of circulatory system, osteoporosis, as well as initiation of skin immune responses.
