

## Product datasheet for RC210978

### smooth muscle Myosin heavy chain 11 (MYH11) (NM\_022844) Human Tagged ORF Clone

#### Product data:

Product Type:	Expression Plasmids
Product Name:	smooth muscle Myosin heavy chain 11 (MYH11) (NM_022844) Human Tagged ORF Clone
Tag:	Myc-DDK
Symbol:	smooth muscle Myosin heavy chain 11
Synonyms:	AAT4; FAA4; SMHC; SMMHC; VSCM2
Mammalian Cell Selection:	Neomycin
Vector:	pCMV6-Entry (PS100001)
E. coli Selection:	Kanamycin (25 ug/mL)
ORF Nucleotide Sequence:	>RC210978 representing NM_022844 Red=Cloning site Blue=ORF Green=Tags(s)

Cloning Scheme:

ACCN: NM\_022844

ORF Size: 5814 bp

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. [More info](#)

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method:

1. Centrifuge at 5,000xg for 5min.
2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.
5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

Note: Plasmids are not sterile. For experiments where strict sterility is required, filtration with 0.22um filter is required.

RefSeq: [NM\\_022844.2](#), [NP\\_074035.1](#)

**RefSeq Size:** 6921 bp  
**RefSeq ORF:** 5817 bp  
**Locus ID:** 4629  
**UniProt ID:** [P35749](#)  
**Cytogenetics:** 16p13.11  
**Domains:** IQ, myosin\_head, Myosin\_tail, M, Myosin\_N  
**Protein Pathways:** Tight junction, Vascular smooth muscle contraction, Viral myocarditis

**MW:** 223.4 kDa

**Gene Summary:** The protein encoded by this gene is a smooth muscle myosin belonging to the myosin heavy chain family. The gene product is a subunit of a hexameric protein that consists of two heavy chain subunits and two pairs of non-identical light chain subunits. It functions as a major contractile protein, converting chemical energy into mechanical energy through the hydrolysis of ATP. The gene encoding a human ortholog of rat NUDE1 is transcribed from the reverse strand of this gene, and its 3' end overlaps with that of the latter. The pericentric inversion of chromosome 16 [inv(16)(p13q22)] produces a chimeric transcript that encodes a protein consisting of the first 165 residues from the N terminus of core-binding factor beta in a fusion with the C-terminal portion of the smooth muscle myosin heavy chain. This chromosomal rearrangement is associated with acute myeloid leukemia of the M4Eo subtype. Alternative splicing generates isoforms that are differentially expressed, with ratios changing during muscle cell maturation. Alternatively spliced transcript variants encoding different isoforms have been identified. [provided by RefSeq, Jul 2008]
