| Product Type:                | Expression Plasmids  |
|------------------------------|--|
| Product Name:                | TEC (NM_003215) Human Tagged Lenti ORF Clone   |
| Tag:                         | mGFP   |
| Symbol:                      | TEC  |
| Synonyms:                    | PSCTK4   |
| Mammalian Cell<br>Selection: | None   |
| Vector:                      | pLenti-C-mGFP (PS100071)   |
| E. coli Selection:           | Chloramphenicol (34 ug/mL)   |
| ORF Nucleotide<br>Sequence:  | The ORF insert of this clone is exactly the same as(RC210992).                           |
| <b>Restriction Sites:</b>    | Sgfl-Mlul  |
| Cloning Scheme:              |  |
|                              | Cloning sites used for ORF Shuttling:  |
|                              | Sgf I         ORF         Mlu I           [GCG ATC GC]         ATG// NNÑ         ACG CGT |
|                              |  |

ACCN: ORF Size:

NM\_003215 1893 bp

# **TEC (NM\_003215) Human Tagged Lenti ORF Clone – RC210992L2**

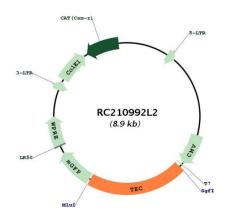

| OTI Disclaimer:        | Due to the inherent nature of this plasmid, standard methods to replicate additional amounts<br>of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore,<br>OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts<br>of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a<br>reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by<br>calling 301.340.3188 option 3 for pricing and delivery.<br>The molecular sequence of this clone aligns with the gene accession number as a point of<br>reference only. However, individual transcript sequences of the same gene can differ through<br>naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This |
|------------------------|--|
|                        | clone is substantially in agreement with the reference, but a complete review of all prevailing<br>variants is recommended prior to use. <u>More info</u>  |
| OTI Annotation:        | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.   |
| Components:            | The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).   |
| Reconstitution Method: | <ol> <li>Centrifuge at 5,000xg for 5min.</li> <li>Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>Close the tube and incubate for 10 minutes at room temperature.</li> <li>Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ol>   |
| RefSeq:                | <u>NM 003215.2</u>   |
| RefSeq Size:           | 3620 bp  |
| RefSeq ORF:            | 1896 bp  |
| Locus ID:              | 7006   |
| UniProt ID:            | <u>P42680</u>  |
| Cytogenetics:          | 4p12-p11   |
| Domains:               | pkinase, SH2, TyrKc, SH3, BTK, PH, S_TKc   |
| Protein Families:      | Druggable Genome, Protein Kinase   |
| Protein Pathways:      | T cell receptor signaling pathway  |
| MW:                    | 73.6 kDa   |

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

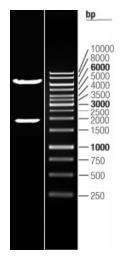

### **GRIGENE** TEC (NM\_003215) Human Tagged Lenti ORF Clone – RC210992L2

Gene Summary:The protein encoded by this gene belongs to the Tec family of non-receptor protein-tyrosine<br/>kinases containing a pleckstrin homology domain. Tec family kinases are involved in the<br/>intracellular signaling mechanisms of cytokine receptors, lymphocyte surface antigens,<br/>heterotrimeric G-protein coupled receptors, and integrin molecules. They are also key players<br/>in the regulation of the immune functions. Tec kinase is an integral component of T cell<br/>signaling and has a distinct role in T cell activation. This gene may be associated with<br/>myelodysplastic syndrome. [provided by RefSeq, Jul 2008]
