	Apolipoprotein A V (APOA5) (NM_052968) Human Tagged ORF Clone Lentiviral Particle – RC211023L2V	
Protein Pathwa	PPAR signaling pathway	
MW:	41.2 kDa	
Gene Summary:	The protein encoded by this gene is an apolipoprotein that plays an important role in regulating the plasma triglyceride levels, a major risk factor for coronary artery disease. It is a component of high density lipoprotein and is highly similar to a rat protein that is upregulated in response to liver injury. Mutations in this gene have been associated with hypertriglyceridemia and hyperlipoproteinemia type 5. This gene is located proximal to the apolipoprotein gene cluster on chromosome 11q23. Alternatively spliced transcript variants encoding the same protein have been identified. [provided by RefSeq, Oct 2009]
