| OTI Disclaimer:              | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u> |
| OTI Annotation:              | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.  |

Gene Summary:The protein encoded by this gene is a member of the nephrin-like protein family. These<br/>proteins are expressed in fetal and adult brain, and also in podocytes of kidney glomeruli.<br/>The cytoplasmic domains of these proteins interact with the C-terminus of podocin, also<br/>expressed in the podocytes, cells involved in ensuring size- and charge-selective<br/>ultrafiltration. The protein encoded by this gene is a synaptic cell adhesion molecule with<br/>multiple extracellular immunoglobulin-like domains and a cytoplasmic PDZ domain-binding<br/>motif. Mutations in this gene are associated with several neurological and cognitive disorders.<br/>Alternatively spliced transcript variants encoding different isoforms have been found for this<br/>gene.
