OTI Disclaimer:

The ORF insert of this clone is exactly the same as(RC211112).

Sequence:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

 CD20

**Protein Families:** Druggable Genome, Transmembrane

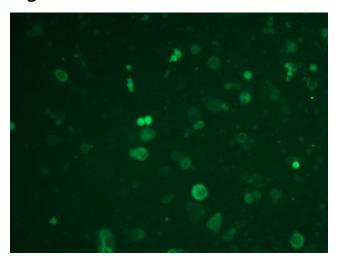

**MW:** 24.3 kDa

**Gene Summary:** This gene encodes a member of the membrane-spanning 4A gene family. Members of this

nascent protein family are characterized by common structural features and similar intron/exon splice boundaries and display unique expression patterns among hematopoietic cells and nonlymphoid tissues. The gene encoding this protein is localized to 11q12.1, among a cluster of family members. Alternative splicing of this gene results in several transcript

variants that encode different protein isoforms. [provided by RefSeq, Oct 2011]
