

Product datasheet for RC211151L4

HYAL4 (NM_012269) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: HYAL4 (NM 012269) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: HYAL4

Synonyms: CSHY; HYAL-4

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC211151).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

st The last codon before the Stop codon of the ORF.

ACCN: NM_012269

ORF Size: 1443 bp

OriGene Technologies, Inc. 9620 Medical Center Drive, Ste 200

HYAL4 (NM_012269) Human Tagged Lenti ORF Clone - RC211151L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

7q31.32

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 012269.1</u>

 RefSeq Size:
 2411 bp

 RefSeq ORF:
 1446 bp

 Locus ID:
 23553

 UniProt ID:
 Q2M3T9

Cytogenetics:

Domains: Glyco hydro 56

Protein Pathways: Glycosaminoglycan degradation, Metabolic pathways

MW: 54.3 kDa

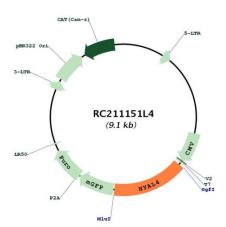

Gene Summary: This gene encodes a protein which is similar in structure to hyaluronidases but lacks

hyaluronidase activity. The encoded protein acts as a chondroitin-sulfate-specific endo-beta-N-acetylgalactosaminidase; that is, it exhibits hydrolytic activity toward chondroitin sulfate chains and degrades them into oligosaccharides. Proteoglycans are formed by the covalent linkage of chondroitin sulfate chains to protein. Proteoglycans are ubiquitous components of the extracellular matrix of connective tissues and are also found at the surface of many cell types where they participate in a variety of cellular processes such as cell proliferation, differentiation, migration, cell-cell recognition, extracellular matrix deposition, and tissue morphogenesis. The expression of this gene is highest in testes and placenta. [provided by

RefSeq, Apr 2019]
