GRIGENE EHD1 (NM_006795) Human Tagged Lenti ORF Clone – RC211158L1

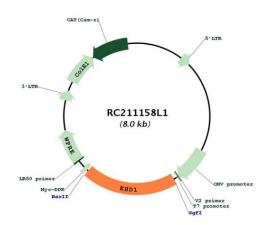

OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery. The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression
	varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	 Centrifuge at 5,000xg for 5min. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. Close the tube and incubate for 10 minutes at room temperature. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	<u>NM 006795.2</u>
RefSeq Size:	3533 bp
RefSeq ORF:	1605 bp

Section 2012 CRIGENE EHD1 (NM_006795) Human Tagged Lenti ORF Clone – RC211158L1

Gene Summary:This gene belongs to a highly conserved gene family encoding EPS15 homology (EH) domain-
containing proteins. The protein-binding EH domain was first noted in EPS15, a substrate for
the epidermal growth factor receptor. The EH domain has been shown to be an important
motif in proteins involved in protein-protein interactions and in intracellular sorting. The
protein encoded by this gene is thought to play a role in the endocytosis of IGF1 receptors.
Alternatively spliced transcript variants have been found for this gene. [provided by RefSeq,
Sep 2013]
