ORIGENE EHD1 (NM_006795) Human Tagged ORF Clone Lentiviral Particle – RC211158L2V	
Protein Pathways:	Endocytosis
MW:	60.6 kDa
Gene Summary:	This gene belongs to a highly conserved gene family encoding EPS15 homology (EH) domain- containing proteins. The protein-binding EH domain was first noted in EPS15, a substrate for the epidermal growth factor receptor. The EH domain has been shown to be an important motif in proteins involved in protein-protein interactions and in intracellular sorting. The protein encoded by this gene is thought to play a role in the endocytosis of IGF1 receptors. Alternatively spliced transcript variants have been found for this gene.
