## Product datasheet for RC211209L1

## TAS2R38 (NM_176817) Human Tagged Lenti ORF Clone

## Product data:

## Product Type: Expression Plasmids

Product Name: TAS2R38 (NM_176817) Human Tagged Lenti ORF Clone

## Tag:

Symbol:
Synonyms:
Mammalian Cell
Selection:
Vector:
E. coli Selection:

ORF Nucleotide
Sequence:
Restriction Sites:
Cloning Scheme:

Myc-DDK
TAS2R38
PTC; T2R38; T2R61; THIOT
None
pLenti-C-Myc-DDK (PS100064)
Chloramphenicol ( $34 \mathrm{ug} / \mathrm{mL}$ )
The ORF insert of this clone is exactly the same as(RC211209).

Sgfl-Mlul

Cloning sites used for ORF Shuttling:

GAT CTG GCA GCA AAT GAT ATC CTG GAT TAC AAG GAT GAC GAC GAT AAG GTT TAA ACGGCCGGCC $\begin{array}{llllllllllllllllll}\mathrm{D} & \mathrm{L} & \mathrm{A} & \mathrm{A} & \mathrm{N} & \mathrm{D} & \mathrm{I} & \mathrm{L} & \mathrm{D} & \mathrm{Y} & \mathrm{K} & \mathrm{D} & \mathrm{D} & \mathrm{D} & \mathrm{D} & \mathrm{K} & \mathrm{V} & \text { stop }\end{array}$

* The last codon before the Stop codon of the ORF

ACCN:
ORF Size:

NM_176817
999 bp

Protein Families:
Protein Pathways:
MW:
Gene Summary:

1. Centrifuge at $5,000 \mathrm{xg}$ for 5 min .
2. Carefully open the tube and add 100 ul of sterile water to dissolve the DNA.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin (less than 5000 xg ) to concentrate the liquid at the bottom.
5. Store the suspended plasmid at $-20^{\circ} \mathrm{C}$. The DNA is stable for at least one year from date of shipping when stored at $-20^{\circ} \mathrm{C}$.
The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info

This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Druggable Genome, Transmembrane
Taste transduction
37.9 kDa

This gene encodes a seven-transmembrane G protein-coupled receptor that controls the ability to taste glucosinolates, a family of bitter-tasting compounds found in plants of the Brassica sp. Synthetic compounds phenylthiocarbamide (PTC) and 6-n-propylthiouracil (PROP) have been identified as ligands for this receptor and have been used to test the genetic diversity of this gene. Although several allelic forms of this gene have been identified worldwide, there are two predominant common forms (taster and non-taster) found outside of Africa. These alleles differ at three nucleotide positions resulting in amino acid changes in the protein (A49P, A262V, and V296I) with the amino acid combination PAV identifying the taster variant (and AVI identifying the non-taster variant). [provided by RefSeq, Oct 2009]
