## TAS2R38 (NM\_176817) Human Tagged Lenti ORF Clone

**Product data:** 

**Product Type: Expression Plasmids** 

**Product Name:** TAS2R38 (NM\_176817) Human Tagged Lenti ORF Clone

Tag: mGFP

Symbol: TAS2R38

PTC; T2R38; T2R61; THIOT Synonyms:

**Mammalian Cell** None

Selection:

Vector: pLenti-C-mGFP (PS100071) E. coli Selection: Chloramphenicol (34 ug/mL)

The ORF insert of this clone is exactly the same as(RC211209). **ORF Nucleotide** 

Sgfl-Mlul

Sequence:

**Restriction Sites:** 

**Cloning Scheme:** 

<sup>\*</sup> The last codon before the Stop codon of the ORF.

ACCN: NM\_176817

**ORF Size:** 999 bp

### TAS2R38 (NM\_176817) Human Tagged Lenti ORF Clone - RC211209L2

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

**RefSeq:** <u>NM 176817.2</u>

RefSeq Size:1143 bpRefSeq ORF:1002 bpLocus ID:5726

 UniProt ID:
 P59533

 Cytogenetics:
 7q34

**Protein Families:** Druggable Genome, Transmembrane

**Protein Pathways:** Taste transduction

MW: 37.9 kDa

**Gene Summary:** This gene encodes a seven-transmembrane G protein-coupled receptor that controls the

ability to taste glucosinolates, a family of bitter-tasting compounds found in plants of the Brassica sp. Synthetic compounds phenylthiocarbamide (PTC) and 6-n-propylthiouracil (PROP)

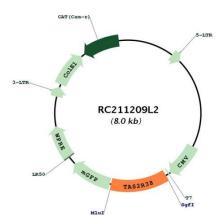

have been identified as ligands for this receptor and have been used to test the genetic diversity of this gene. Although several allelic forms of this gene have been identified

of Africa. These alleles differ at three nucleotide positions resulting in amino acid changes in the protein (A49P, A262V, and V296l) with the amino acid combination PAV identifying the taster variant (and AVI identifying the non-taster variant). [provided by RefSeq, Oct 2009]

worldwide, there are two predominant common forms (taster and non-taster) found outside
