# Product datasheet for RC211230L2

## Eph receptor A4 (EPHA4) (NM\_004438) Human Tagged Lenti ORF Clone

### **Product data:**

Product Type:	Expression Plasmids
Product Name:	Eph receptor A4 (EPHA4) (NM_004438) Human Tagged Lenti ORF Clone
Tag:	mGFP
Symbol:	Eph receptor A4
Synonyms:	EK8; HEK8; SEK; TYRO1
Mammalian Cell Selection:	None
Vector:	pLenti-C-mGFP (PS100071)
E. coli Selection:	Chloramphenicol (34 ug/mL)
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC211230).
<b>Restriction Sites:</b>	Sgfl-Mlul
Cloning Scheme:	
	Cloning sites used for ORF Shuttling:
	Sgf I         ORF         Mlu I            GCG ATC GCC         ATG // NNN         ACG CGT

ACCN: ORF Size: NM\_004438 2958 bp

<b>ORIGENE</b> Eph	eceptor A4 (EPHA4) (NM_004438) Human Tagged Lenti ORF Clone – RC211230L2
OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Metho	<ol> <li>Centrifuge at 5,000xg for 5min.</li> <li>Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>Close the tube and incubate for 10 minutes at room temperature.</li> <li>Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ol>
RefSeq:	<u>NM 004438.3</u>
RefSeq Size:	6364 bp
RefSeq ORF:	2961 bp
Locus ID:	2043
UniProt ID:	<u>P54764</u>
Cytogenetics:	2q36.1
Domains:	pkinase, EPH_lbd, TyrKc, SAM, S_TKc, FN3
Protein Families:	Druggable Genome, Protein Kinase, Transmembrane
Protein Pathways:	Axon guidance
MW:	109.7 kDa

### **CRIGENE** Eph receptor A4 (EPHA4) (NM\_004438) Human Tagged Lenti ORF Clone – RC211230L2

# Gene Summary:This gene belongs to the ephrin receptor subfamily of the protein-tyrosine kinase family. EPH<br/>and EPH-related receptors have been implicated in mediating developmental events,<br/>particularly in the nervous system. Receptors in the EPH subfamily typically have a single<br/>kinase domain and an extracellular region containing a Cys-rich domain and 2 fibronectin<br/>type III repeats. The ephrin receptors are divided into 2 groups based on the similarity of their<br/>extracellular domain sequences and their affinities for binding ephrin-A and ephrin-B ligands.<br/>Multiple transcript variants encoding different isoforms have been found for this gene.<br/>[provided by RefSeq, Jan 2015]
