### Angiopoietin 4 (ANGPT4) (NM 015985) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

Product Type: Lentiviral Particles

**Product Name:** Angiopoietin 4 (ANGPT4) (NM\_015985) Human Tagged ORF Clone Lentiviral Particle

Symbol: Angiopoietin 4
Synonyms: ANG3; ANG4

Mammalian Cell N

Selection:

None

**Vector:** pLenti-C-mGFP (PS100071)

Tag: mGFP

**ACCN:** NM\_015985 **ORF Size:** 1509 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC211289).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This

naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 015985.2

 RefSeq Size:
 1955 bp

 RefSeq ORF:
 1512 bp

 Locus ID:
 51378

 UniProt ID:
 Q9Y264

 Cytogenetics:
 20p13

**Protein Families:** Druggable Genome, Secreted Protein

**MW:** 56.8 kDa

# Angiopoietin 4 (ANGPT4) (NM\_015985) Human Tagged ORF Clone Lentiviral Particle – RC211289L2V

#### **Gene Summary:**

Angiopoietins are proteins with important roles in vascular development and angiogenesis. All angiopoietins bind with similar affinity to an endothelial cell-specific tyrosine-protein kinase receptor. The mechanism by which they contribute to angiogenesis is thought to involve regulation of endothelial cell interactions with supporting perivascular cells. The protein encoded by this gene functions as an agonist and is an angiopoietin. [provided by RefSeq, Jul 2008]
