GLP1R (NM_002062) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: GLP1R (NM 002062) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: GLP1R

Synonyms: GLP-1; GLP-1-R; GLP-1R

Mammalian Cell None

Selection:

Vector: pLenti-C-mGFP (PS100071)

E. coli Selection: Chloramphenicol (34 ug/mL)

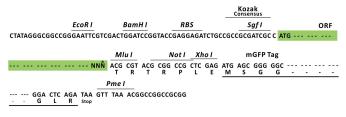

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC211333).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_002062

ORF Size: 1389 bp

GLP1R (NM_002062) Human Tagged Lenti ORF Clone - RC211333L2

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 002062.2</u>

RefSeq Size: 3071 bp
RefSeq ORF: 1392 bp
Locus ID: 2740

UniProt ID: P43220
Cytogenetics: 6p21.2

Protein Families: Druggable Genome, ES Cell Differentiation/IPS, GPCR, Transmembrane

Protein Pathways: Neuroactive ligand-receptor interaction

MW: 52.8 kDa

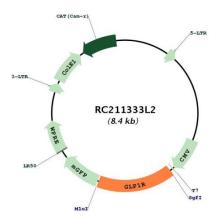

Gene Summary: This gene encodes a 7-transmembrane protein that functions as a receptor for glucagon-like

peptide 1 (GLP-1) hormone, which stimulates glucose-induced insulin secretion. This receptor, which functions at the cell surface, becomes internalized in response to GLP-1 and GLP-1 analogs, and it plays an important role in the signaling cascades leading to insulin secretion. It also displays neuroprotective effects in animal models. Polymorphisms in this gene are associated with diabetes. The protein is an important drug target for the treatment of type 2 diabetes and stroke. Alternative splicing of this gene results in multiple transcript variants.
