FBXO9 (NM_012347) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: FBXO9 (NM_012347) Human Tagged ORF Clone Lentiviral Particle

Symbol: FBXO9

Synonyms: dJ341E18.2; FBX9; NY-REN-57; VCIA1

Mammalian Cell

Selection:

Puromycin

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

ACCN: NM_012347 **ORF Size:** 1341 bp

ORF Nucleotide

Sequence:
OTI Disclaimer:

Domains:

The ORF insert of this clone is exactly the same as (RC211381).

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeg: NM 012347.3

 RefSeq Size:
 3164 bp

 RefSeq ORF:
 1344 bp

 Locus ID:
 26268

 UniProt ID:
 Q9UK97

 Cytogenetics:
 6p12.1

Protein Families: Druggable Genome

F-box

ORIGENE

MW: 52.1 kDa

Gene Summary:

This gene encodes a member of the F-box protein family which is characterized by an approximately 40 amino acid motif, the F-box. The F-box proteins constitute one of the four subunits of the ubiquitin protein ligase complex called SCFs (SKP1-cullin-F-box), which function in phosphorylation-dependent ubiquitination. The F-box proteins are divided into 3 classes: Fbws containing WD-40 domains, Fbls containing leucine-rich repeats, and Fbxs containing either different protein-protein interaction modules or no recognizable motifs. The protein encoded by this gene belongs to the Fbxs class. Alternative splicing of this gene generates at least 3 transcript variants diverging at the 5' terminus. [provided by RefSeq, Jul 2008]
