OR4A15 (NM_001005275) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: OR4A15 (NM_001005275) Human Tagged ORF Clone Lentiviral Particle

Symbol: OR4A15
Synonyms: OR11-118
Mammalian Cell Puromycin

Selection:

Vector:

pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

ACCN: NM 001005275

ORF Size: 1032 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC211400).

OTI Disclaimer:

Sequence:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 001005275.1</u>, <u>NP 001005275.1</u>

RefSeq Size: 1035 bp
RefSeq ORF: 1035 bp
Locus ID: 81328
UniProt ID: Q8NGL6
Cytogenetics: 11q11

Protein Families: Transmembrane

Protein Pathways: Olfactory transduction

ORIGENE

MW: 38.6 kDa

Gene Summary:

Olfactory receptors interact with odorant molecules in the nose, to initiate a neuronal response that triggers the perception of a smell. The olfactory receptor proteins are members of a large family of G-protein-coupled receptors (GPCR) arising from single coding-exon genes. Olfactory receptors share a 7-transmembrane domain structure with many neurotransmitter and hormone receptors and are responsible for the recognition and G protein-mediated transduction of odorant signals. The olfactory receptor gene family is the largest in the genome. The nomenclature assigned to the olfactory receptor genes and proteins for this organism is independent of other organisms. [provided by RefSeq, Jul 2008]
