Product Type:	Expression Plasmids
Product Name:	FLT3 (NM_004119) Human Tagged Lenti ORF Clone
Tag:	Myc-DDK
Symbol:	FLT3
Synonyms:	CD135; FLK-2; FLK2; STK1
Mammalian Cell Selection:	None
Vector:	pLenti-C-Myc-DDK (PS100064)
E. coli Selection:	Chloramphenicol (34 ug/mL)
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC211459).
<b>Restriction Sites:</b>	Sgfl-Mlul
Cloning Scheme:	
	Cloning sites used for ORF Shuttling:
	Sgf1         ORF         Miu I            GCG ATC GC         ATG // NNN         ACG CGT

\* The last codon before the Stop codon of the ORF.

ACCN: ORF Size: NM\_004119 2979 bp

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

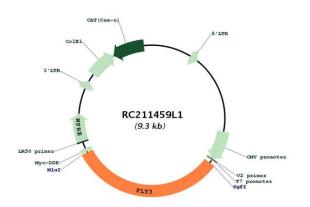

Second Se	
OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Metl	<ul> <li>1. Centrifuge at 5,000xg for 5min.</li> <li>2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>3. Close the tube and incubate for 10 minutes at room temperature.</li> <li>4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ul>
RefSeq:	<u>NM 004119.1</u>
RefSeq Size:	3475 bp
RefSeq ORF:	2982 bp
Locus ID:	2322
UniProt ID:	<u>P36888</u>
Cytogenetics:	13q12.2
Protein Families:	Druggable Genome, ES Cell Differentiation/IPS, Protein Kinase, Transmembrane
Protein Pathways:	Acute myeloid leukemia, Cytokine-cytokine receptor interaction, Hematopoietic cell lineage, Pathways in cancer
MW:	112.7 kDa

## SET STATES (NM\_004119) Human Tagged Lenti ORF Clone – RC211459L1

# Gene Summary:This gene encodes a class III receptor tyrosine kinase that regulates hematopoiesis. This<br/>receptor is activated by binding of the fms-related tyrosine kinase 3 ligand to the extracellular<br/>domain, which induces homodimer formation in the plasma membrane leading to<br/>autophosphorylation of the receptor. The activated receptor kinase subsequently<br/>phosphorylates and activates multiple cytoplasmic effector molecules in pathways involved in<br/>apoptosis, proliferation, and differentiation of hematopoietic cells in bone marrow. Mutations<br/>that result in the constitutive activation of this receptor result in acute myeloid leukemia and<br/>acute lymphoblastic leukemia. [provided by RefSeq, Jan 2015]
