DEPDC5 (NM_001007188) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: DEPDC5 (NM 001007188) Human Tagged Lenti ORF Clone

Tag: mGFP

Symbol: DEPDC5

Synonyms: DEP.5; FFEVF; FFEVF1

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone

Sequence:

The ORF insert of this clone is exactly the same as(RC211462).

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_001007188

ORF Size: 1677 bp

DEPDC5 (NM_001007188) Human Tagged Lenti ORF Clone - RC211462L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

O75140

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001007188.1</u>

RefSeq Size:2460 bpRefSeq ORF:1680 bpLocus ID:9681

UniProt ID:

Cytogenetics: 22q12.2-q12.3

MW: 63.7 kDa

Gene Summary: This gene encodes a member of the IML1 family of proteins involved in G-protein signaling

pathways. The mechanistic target of rapamycin complex 1 (mTORC1) pathway regulates cell

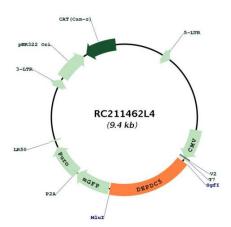

growth by sensing the availability of nutrients. The protein encoded by this gene is a component of the GATOR1 (GAP activity toward Rags) complex which inhibits the amino acid-

sensing branch of the mTORC1 pathway. Mutations in this gene are associated with autosomal dominant familial focal epilepsy with variable foci. A single nucleotide polymorphism in an intron of this gene has been associated with an increased risk of hepatocellular carcinoma in individuals with chronic hepatitis C virus infection. Alternative

splicing results in multiple transcript variants. [provided by RefSeq, Mar 2014]
