

Product datasheet for RC211489L1

IDN3 (NIPBL) (NM_133433) Human Tagged Lenti ORF Clone

Product data:

| Product Type: | Expression Plasmids |
|------------------------------|---|
| Product Name: | IDN3 (NIPBL) (NM_133433) Human Tagged Lenti ORF Clone |
| Tag: | Myc-DDK |
| Symbol: | IDN3 |
| Synonyms: | CDLS; CDLS1; IDN3; IDN3-B; Scc2 |
| Mammalian Cell Selection: | None |
| Vector: | pLenti-C-Myc-DDK (PS100064) |
| E. coli Selection: | Chloramphenicol (34 ug/mL) |
| ORF Nucleotide Sequence: | The ORF insert of this clone is exactly the same as(RC211489). |
| Restriction Sites: | Sgfl-Mlul |
| Cloning Scheme: | |
| | Cloning sites used for ORF Shuttling: |
| | Sgf1 ORF Miu I GCG ATC GC/c ATG // NNN ACG CGT |

ACCN: ORF Size:

|---------------------|--|
| OTI Disclaimer: | Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery. |
| | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u> |
| OTI Annotation: | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene. |
| Components: | The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water). |
| Reconstitution Meth | 1. Centrifuge at 5,000xg for 5min. 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. 3. Close the tube and incubate for 10 minutes at room temperature. 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C. |
| RefSeq: | <u>NM 133433.2</u> |
| RefSeq Size: | 9717 bp |
| RefSeq ORF: | 8415 bp |
| Locus ID: | 25836 |
| UniProt ID: | <u>Q6KC79</u> |
| Cytogenetics: | 5p13.2 |
| MW: | 315.9 kDa |

CRIGENE IDN3 (NIPBL) (NM_133433) Human Tagged Lenti ORF Clone – RC211489L1

Gene Summary:This gene encodes the homolog of the Drosophila melanogaster Nipped-B gene product and
fungal Scc2-type sister chromatid cohesion proteins. The Drosophila protein facilitates
enhancer-promoter communication of remote enhancers and plays a role in developmental
regulation. It is also homologous to a family of chromosomal adherins with broad roles in
sister chromatid cohesion, chromosome condensation, and DNA repair. The human protein
has a bipartite nuclear targeting sequence and a putative HEAT repeat. Condensins, cohesins
and other complexes with chromosome-related functions also contain HEAT repeats.
Mutations in this gene result in Cornelia de Lange syndrome, a disorder characterized by
dysmorphic facial features, growth delay, limb reduction defects, and cognitive disability. Two
transcript variants encoding different isoforms have been found for this gene. [provided by
RefSeq, Jul 2008]
