## Galactosylceramidase (GALC) (NM\_000153) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

Product Type: Lentiviral Particles

**Product Name:** Galactosylceramidase (GALC) (NM\_000153) Human Tagged ORF Clone Lentiviral Particle

Symbol: Galactosylceramidase

**Mammalian Cell** 

Selection:

Puromycin

**Vector:** pLenti-C-Myc-DDK-P2A-Puro (PS100092)

Tag: Myc-DDK

**ACCN:** NM\_000153

ORF Size: 2055 bp

**ORF Nucleotide** 

---

Sequence:

The ORF insert of this clone is exactly the same as(RC211578).

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeq:** <u>NM 000153.2</u>

RefSeq Size: 4185 bp
RefSeq ORF: 2058 bp
Locus ID: 2581

UniProt ID: P54803
Cytogenetics: 14q31.3

Domains: Glyco\_hydro\_59
Protein Families: Druggable Genome

**Protein Pathways:** Lysosome, Metabolic pathways, Sphingolipid metabolism

## Galactosylceramidase (GALC) (NM\_000153) Human Tagged ORF Clone Lentiviral Particle – RC211578L3V

**MW:** 77.06 kDa

**Gene Summary:** This gene encodes a lysosomal protein which hydrolyzes the galactose ester bonds of

galactosylceramide, galactosylsphingosine, lactosylceramide, and monogalactosyldiglyceride. Mutations in this gene have been associated with Krabbe disease, also known as globoid cell leukodystrophy. Alternate transcriptional splice variants, encoding different isoforms, have

been characterized. [provided by RefSeq, Jul 2008]
