

Product datasheet for RC211692L1

CIT (NM_007174) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: CIT (NM_007174) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: CIT

Synonyms: CITK; CRIK; MCPH17; STK21

Mammalian Cell None

Selection:

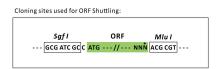

Vector:pLenti-C-Myc-DDK (PS100064)E. coli Selection:Chloramphenicol (34 ug/mL)

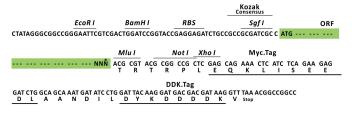

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC211692).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_007174

ORF Size: 6081 bp

CIT (NM_007174) Human Tagged Lenti ORF Clone - RC211692L1

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 007174.1</u>

 RefSeq Size:
 8576 bp

 RefSeq ORF:
 6084 bp

 Locus ID:
 11113

 UniProt ID:
 014578

 Cytogenetics:
 12q24.23

Protein Families: Druggable Genome, Protein Kinase

MW: 231.3 kDa

Gene Summary: This gene encodes a serine/threonine-protein kinase that functions in cell division. Together

with the kinesin KIF14, this protein localizes to the central spindle and midbody, and functions

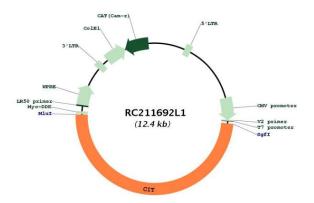

to promote efficient cytokinesis. This protein is involved in central nervous system

development. Polymorphisms in this gene are associated with bipolar disorder and risk for schizophrenia. Alternative splicing results in multiple transcript variants. [provided by RefSeq,

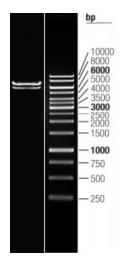

Aug 2011]
