**Protein Pathways:** Calcium signaling pathway, Neuroactive ligand-receptor interaction

**MW:** 42.6 kDa

**Gene Summary:** The protein encoded by this gene belongs to the G-protein coupled receptor family and acts as a receptor for oxytocin. Its activity is mediated by G proteins which activate a phosphatidylinositol-calcium second messenger system. The oxytocin-oxytocin receptor system plays an important role in the uterus during parturition. [provided by RefSeq, Jul 2008]
