Glucuronic Acid Epimerase (GLCE) (NM_015554) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Glucuronic Acid Epimerase (GLCE) (NM_015554) Human Tagged Lenti ORF Clone

Tag: mGFF

Symbol: Glucuronic Acid Epimerase

Synonyms: HSEPI
Mammalian Cell None

Selection:

Vector: pLenti-C-mGFP (PS100071)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC211866).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_015554

ORF Size: 1851 bp

Glucuronic Acid Epimerase (GLCE) (NM_015554) Human Tagged Lenti ORF Clone - RC211866L2

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 015554.1</u>

 RefSeq Size:
 5043 bp

 RefSeq ORF:
 1854 bp

 Locus ID:
 26035

 UniProt ID:
 094923

 Cytogenetics:
 15q23

Protein Families: Transmembrane

Protein Pathways: Heparan sulfate biosynthesis, Metabolic pathways

MW: 69.9 kDa

Gene Summary: Converts D-glucuronic acid residues adjacent to N-sulfate sugar residues to L-iduronic acid

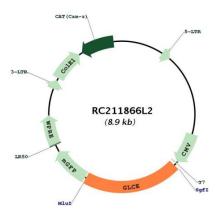

residues, both in maturing heparan sulfate (HS) and heparin chains. This is important for

further modifications that determine the specificity of interactions between these

glycosaminoglycans and proteins.[UniProtKB/Swiss-Prot Function]
