| OTI Disclaimer: | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u> |
| OTI Annotation: | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.  |

Gene Summary:This gene encodes a mitochondrial protein that binds leucine tRNAs and other mitochondrial<br/>RNAs and plays a role in the regulation of translation. Increased expression of this gene<br/>results in decreased mitochondrial leucine tRNA levels. Naturally occurring read-through<br/>transcription exists between upstream ATP5J2 (ATP synthase, H+ transporting, mitochondrial<br/>Fo complex, subunit F2) and this gene.
