## IL15RA (NM\_002189) Human Tagged ORF Clone Lentiviral Particle

### **Product data:**

Product Type: Lentiviral Particles

Product Name: IL15RA (NM 002189) Human Tagged ORF Clone Lentiviral Particle

Symbol: IL15RA
Synonyms: CD215

Mammalian Cell

Selection:

None

**Vector:** pLenti-C-mGFP (PS100071)

Tag: mGFP

ACCN: NM\_002189

ORF Size: 801 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC211921).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 002189.2

 RefSeq Size:
 1610 bp

 RefSeq ORF:
 804 bp

 Locus ID:
 3601

 UniProt ID:
 Q13261

 Cytogenetics:
 10p15.1

Domains: CCP

**Protein Families:** Druggable Genome, Secreted Protein

# IL15RA (NM\_002189) Human Tagged ORF Clone Lentiviral Particle - RC211921L2V

**Protein Pathways:** Cytokine-cytokine receptor interaction, Jak-STAT signaling pathway

MW: 28.22 kDa

**Gene Summary:** This gene encodes a cytokine receptor that specifically binds interleukin 15 (IL15) with high

affinity. The receptors of IL15 and IL2 share two subunits, IL2R beta and IL2R gamma. This forms the basis of many overlapping biological activities of IL15 and IL2. The protein encoded by this gene is structurally related to IL2R alpha, an additional IL2-specific alpha subunit necessary for high affinity IL2 binding. Unlike IL2RA, IL15RA is capable of binding IL15 with high affinity independent of other subunits, which suggests distinct roles between IL15 and IL2. This receptor is reported to enhance cell proliferation and expression of apoptosis inhibitor BCL2L1/BCL2-XL and BCL2. Multiple alternatively spliced transcript variants of this

gene have been reported.[provided by RefSeq, Apr 2010]
