C1orf69 (IBA57) (NM 001010867) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: C1orf69 (IBA57) (NM_001010867) Human Tagged ORF Clone Lentiviral Particle

Symbol: C1orf69

Synonyms: C1orf69; MMDS3; SPG74

Mammalian Cell

Selection:

None

Vector: pLenti-C-mGFP (PS100071)

Tag: mGFP

ACCN: NM_001010867

ORF Size: 1068 bp

ORF Nucleotide

OTI Disclaimer:

The ORF insert of this clone is exactly the same as(RC211947).

Sequence:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeg: NM 001010867.1

 RefSeq Size:
 7817 bp

 RefSeq ORF:
 1071 bp

 Locus ID:
 200205

 UniProt ID:
 Q5T440

 Cytogenetics:
 1q42.13

 MW:
 38 kDa

Gene Summary:

The protein encoded by this gene localizes to the mitochondrion and is part of the iron-sulfur cluster assembly pathway. The encoded protein functions late in the biosynthesis of mitochondrial 4Fe-4S proteins. Defects in this gene have been associated with autosomal recessive spastic paraplegia-74 and with multiple mitochondrial dysfunctions syndrome-3. Two transcript variants encoding different isoforms have been found for this gene. The smaller isoform is not likely to be localized to the mitochondrion since it lacks the aminoterminal transit peptide. [provided by RefSeq, Jul 2015]
