PHOS (PDC) (NM_022576) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: PHOS (PDC) (NM_022576) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: PHOS

Synonyms: MEKA; PHD; PhLOP; PhLP

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clo

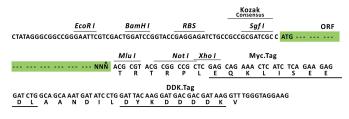

Sequence:

The ORF insert of this clone is exactly the same as (RC212016).

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_022576

ORF Size: 582 bp

PHOS (PDC) (NM_022576) Human Tagged Lenti ORF Clone - RC212016L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 022576.2</u>, <u>NP 072098.1</u>

RefSeq Size: 1221 bp
RefSeq ORF: 585 bp
Locus ID: 5132
UniProt ID: P20941
Cytogenetics: 1q31.1

Protein Families: Druggable Genome

Protein Pathways: Olfactory transduction

MW: 22.1 kDa

Gene Summary: This gene encodes a phosphoprotein, which is located in the outer and inner segments of the

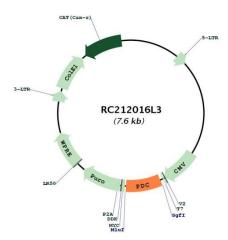

rod cells in the retina. This protein may participate in the regulation of visual

phototransduction or in the integration of photoreceptor metabolism. It modulates the phototransduction cascade by interacting with the beta and gamma subunits of the retinal G-protein transducin. This gene is a potential candidate gene for retinitis pigmentosa and Usher syndrome type II. Alternatively spliced transcript variants encoding different isoforms have

been identified. [provided by RefSeq, Jul 2008]
