GRIGENE Hsc70 (HSPA8) (NM_153201) Human Tagged ORF Clone Lentiviral Particle – RC212092L3V	
Protein Pathways:	Antigen processing and presentation, Endocytosis, MAPK signaling pathway, Spliceosome
MW:	53.3 kDa
Gene Summary:	This gene encodes a member of the heat shock protein 70 family, which contains both heat- inducible and constitutively expressed members. This protein belongs to the latter group, which are also referred to as heat-shock cognate proteins. It functions as a chaperone, and binds to nascent polypeptides to facilitate correct folding. It also functions as an ATPase in the disassembly of clathrin-coated vesicles during transport of membrane components through the cell. Alternatively spliced transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Aug 2011]
