OR52B4 (NM 001005161) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: OR52B4 (NM_001005161) Human Tagged Lenti ORF Clone

Tag: Myc-DDK Symbol: OR52B4 OR11-3 Synonyms: **Mammalian Cell**

Selection:

Vector:

pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

The ORF insert of this clone is exactly the same as(RC212134). **ORF Nucleotide**

Puromycin

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_001005161

ORF Size: 942 bp

OR52B4 (NM_001005161) Human Tagged Lenti ORF Clone - RC212134L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001005161.1</u>, <u>NP 001005161.2</u>

 RefSeq Size:
 945 bp

 RefSeq ORF:
 945 bp

 Locus ID:
 143496

 UniProt ID:
 <u>O8NGK2</u>

 Cytogenetics:
 11p15.4

Protein Families: Druggable Genome

Protein Pathways: Olfactory transduction

MW: 35.4 kDa

Gene Summary: Olfactory receptors interact with odorant molecules in the nose, to initiate a neuronal

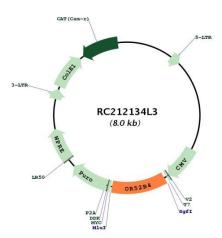

response that triggers the perception of a smell. The olfactory receptor proteins are members of a large family of G-protein-coupled receptors (GPCR) arising from single coding-exon genes. Olfactory receptors share a 7-transmembrane domain structure with many neurotransmitter and hormone receptors and are responsible for the recognition and G protein-mediated transduction of odorant signals. The olfactory receptor gene family is the largest in the genome. The nomenclature assigned to the olfactory receptor genes and proteins for this organism is independent of other organisms. This olfactory receptor gene is a segregating pseudogene, where some individuals have an allele that encodes a functional

olfactory receptor, while other individuals have an allele encoding a protein that is predicted

to be non-functional. [provided by RefSeq, Jun 2015]
