GRIGENE TBL1Y (NM_134259) Human Tagged ORF Clone Lentiviral Particle – RC212240L2V	
Protein Pathways:	Wnt signaling pathway
MW:	56.7 kDa
Gene Summary:	The protein encoded by this gene has sequence similarity with members of the WD40 repeat- containing protein family. The WD40 group is a large family of proteins, which appear to have a regulatory function. It is believed that the WD40 repeats mediate protein-protein interactions and members of the family are involved in signal transduction, RNA processing, gene regulation, vesicular trafficking, cytoskeletal assembly and may play a role in the control of cytotypic differentiation. This gene is highly similar to TBL1X gene in nucleotide sequence and protein sequence, but the TBL1X gene is located on chromosome X and this gene is on chromosome Y. This gene has three alternatively spliced transcript variants encoding the same protein. [provided by RefSeq, Jul 2008]
