| OTI Disclaimer:              | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u> |
| OTI Annotation:              | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.  |

| Gene Summary   | The protein encoded by this gene is a transcriptional coactivator that regulates the genes<br>involved in energy metabolism. This protein interacts with PPARgamma, which permits the<br>interaction of this protein with multiple transcription factors. This protein can interact with,<br>and regulate the activities of, cAMP response element binding protein (CREB) and nuclear<br>respiratory factors (NRFs). It provides a direct link between external physiological stimuli and<br>the regulation of mitochondrial biogenesis, and is a major factor that regulates muscle fiber<br>type determination. This protein may be also involved in controlling blood pressure,<br>regulating cellular cholesterol homoeostasis, and the development of obesity. [provided by<br>RefSeq, Jul 2008] |  |
