

Product datasheet for **RC212352L4V**

Myoglobin (MB) (NM_005368) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type:	Lentiviral Particles
Product Name:	Myoglobin (MB) (NM_005368) Human Tagged ORF Clone Lentiviral Particle
Symbol:	Myoglobin
Synonyms:	PVALB
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-mGFP-P2A-Puro (PS100093)
Tag:	mGFP
ACCN:	NM_005368
ORF Size:	462 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC212352).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	NM_005368.2
RefSeq Size:	1078 bp
RefSeq ORF:	465 bp
Locus ID:	4151
UniProt ID:	P02144
Cytogenetics:	22q12.3
Domains:	globin
MW:	17 kDa

Gene Summary:

This gene encodes a member of the globin superfamily and is predominantly expressed in skeletal and cardiac muscles. The encoded protein forms a monomeric globular haemoprotein that is primarily responsible for the storage and facilitated transfer of oxygen from the cell membrane to the mitochondria. This protein also plays a role in regulating physiological levels of nitric oxide. Multiple transcript variants encoding distinct isoforms exist for this gene. [provided by RefSeq, May 2020]

Product images:

[RC212352L4] was used to prepare Lentiviral particles using [TR30037] packaging kit. HEK293T cells were transduced with RC212352L4V particle to overexpress human MB-mGFP fusion protein.
