## PYGM (NM\_005609) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

Product Type: Lentiviral Particles

**Product Name:** PYGM (NM\_005609) Human Tagged ORF Clone Lentiviral Particle

Symbol:PYGMSynonyms:GSD5

Mammalian Cell

Selection:

None

**Vector:** pLenti-C-Myc-DDK (PS100064)

 Tag:
 Myc-DDK

 ACCN:
 NM\_005609

 ORF Size:
 2526 bp

**ORF Nucleotide** 

Sequence:

The ORF insert of this clone is exactly the same as(RC212365).

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 005609.1

 RefSeq Size:
 3447 bp

 RefSeq ORF:
 2529 bp

 Locus ID:
 5837

 UniProt ID:
 P11217

 Cytogenetics:
 11q13.1

**Domains:** phosphorylase

**Protein Families:** Druggable Genome

## PYGM (NM\_005609) Human Tagged ORF Clone Lentiviral Particle - RC212365L1V

**Protein Pathways:** Insulin signaling pathway, Starch and sucrose metabolism

**MW:** 96.9 kDa

**Gene Summary:** This gene encodes a muscle enzyme involved in glycogenolysis. Highly similar enzymes

encoded by different genes are found in liver and brain. Mutations in this gene are associated with McArdle disease (myophosphorylase deficiency), a glycogen storage disease of muscle. Alternative splicing results in multiple transcript variants.[provided by RefSeq, Sep 2009]
