DACT1 (NM_016651) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: DACT1 (NM 016651) Human Tagged ORF Clone Lentiviral Particle

Symbol: DACT1

Synonyms: DAPPER; DAPPER1; DPR1; FRODO; HDPR1; TBS2; THYEX3

Mammalian Cell

Selection:

Puromycin

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

 Tag:
 Myc-DDK

 ACCN:
 NM_016651

 ORF Size:
 2508 bp

ORF Nucleotide

Sequence:

The ORF insert of this clone is exactly the same as(RC212564).

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through

naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 016651.4</u>

 RefSeq Size:
 3775 bp

 RefSeq ORF:
 2511 bp

 Locus ID:
 51339

 UniProt ID:
 Q9NYF0

 Cytogenetics:
 14q23.1

 MW:
 90 kDa

Gene Summary:

The protein encoded by this gene belongs to the dapper family, characterized by the presence of PDZ-binding motif at the C-terminus. It interacts with, and positively regulates dishevelled-mediated signaling pathways during development. Depletion of this mRNA from xenopus embryos resulted in loss of notochord and head structures, and mice lacking this gene died shortly after birth from severe posterior malformations. Alternatively spliced transcript variants have been found for this gene. [provided by RefSeq, Jan 2012]
