## CEP104 (NM\_014704) Human Tagged Lenti ORF Clone

**Product data:** 

**Product Type:** Expression Plasmids

**Product Name:** CEP104 (NM\_014704) Human Tagged Lenti ORF Clone

Tag: Myc-DDK Symbol: CEP104

Synonyms: CFAP256; GlyBP; JBTS25; KIAA0562; ROC22

Mammalian Cell Puromycin

Selection:

**Vector:** pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC212710).

Sequence:

**Restriction Sites:** Sgfl-Mlul

**Cloning Scheme:** 

<sup>\*</sup> The last codon before the Stop codon of the ORF.

**ACCN:** NM\_014704

ORF Size: 2775 bp

## CEP104 (NM\_014704) Human Tagged Lenti ORF Clone - RC212710L3

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

> reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: NM 014704.1, NP 055519.1

RefSeq Size: 5848 bp RefSeq ORF: 2778 bp Locus ID: 9731

O60308 Cytogenetics: 1p36.32

**UniProt ID:** 

MW: 104.3 kDa

**Gene Summary:** This gene encodes a centrosomal protein required for ciliogenesis and for ciliary tip structural

> integrity. The mammalian protein contains three amino-terminal hydrophobic domains, two glycosylation sites, four cysteine-rich motifs, and two regions with homology to the glutamate receptor ionotropic, NMDA 1 protein. During ciliogenesis, the encoded protein translocates from the distal tips of the centrioles to the tip of the elongating cilium. Knockdown of the protein in human retinal pigment cells results in severe defects in ciliogenesis with structural deformities at the ciliary tips. Allelic variants of this gene are associated with the autosomalrecessive disorder Joubert syndrome, which is characterized by a distinctive mid-hindbrain and cerebellar malformation, oculomotor apraxia, irregular breathing, developmental delay,

and ataxia. [provided by RefSeq, Feb 2016]
