| Product Type:                | Expression Plasmids  |
|------------------------------|--|
| Product Name:                | TAF13 (NM_005645) Human Tagged Lenti ORF Clone   |
| Tag:                         | mGFP   |
| Symbol:                      | TAF13  |
| Synonyms:                    | MRT60; TAF(II)18; TAF2K; TAFII-18; TAFII18   |
| Mammalian Cell<br>Selection: | None   |
| Vector:                      | pLenti-C-mGFP (PS100071)   |
| E. coli Selection:           | Chloramphenicol (34 ug/mL)   |
| ORF Nucleotide<br>Sequence:  | The ORF insert of this clone is exactly the same as(RC212721).                           |
| <b>Restriction Sites:</b>    | Sgfl-Mlul  |
| Cloning Scheme:              |  |
|                              | Cloning sites used for ORF Shuttling:<br>Sgf 1 ORF Mlu I<br>GCG ATC GC ATG// NNŇ ACG CGT |

ACCN: ORF Size: NM\_005645 372 bp

| ORIGENE TAF13          | (NM_005645) Human Tagged Lenti ORF Clone – RC212721L2   |
|------------------------|---|
| OTI Disclaimer:        | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>   |
| OTI Annotation:        | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.  |
| Components:            | The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).  |
| Reconstitution Method: | <ol> <li>Centrifuge at 5,000xg for 5min.</li> <li>Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>Close the tube and incubate for 10 minutes at room temperature.</li> <li>Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ol>  |
| RefSeq:                | <u>NM 005645.3</u>  |
| RefSeq Size:           | 577 bp  |
| RefSeq ORF:            | 375 bp  |
| Locus ID:              | 6884  |
| UniProt ID:            | <u>Q15543</u>   |
| Cytogenetics:          | 1p13.3  |
| Protein Families:      | Transcription Factors   |
| Protein Pathways:      | Basal transcription factors   |
| MW:                    | 14.3 kDa  |
| Gene Summary:          | Initiation of transcription by RNA polymerase II requires the activities of more than 70 polypeptides. The protein that coordinates these activities is transcription factor IID (TFIID), which binds to the core promoter to position the polymerase properly, serves as the scaffold for assembly of the remainder of the transcription complex, and acts as a channel for regulatory signals. TFIID is composed of the TATA-binding protein (TBP) and a group of evolutionarily conserved proteins known as TBP-associated factors or TAFs. TAFs may participate in basal transcription, serve as coactivators, function in promoter recognition or modify general transcription factors (GTFs) to facilitate complex assembly and transcription initiation. This gene encodes a small subunit associated with a subset of TFIID complexes. This subunit interacts with TBP and with two other small subunits of TFIID, TAF10 and TAF11. |

There is a pseudogene located on chromosome 6. [provided by RefSeq, Jul 2008]
