CMG1 (IFT74) (NM_001099222) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: CMG1 (IFT74) (NM_001099222) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: CMG1

Synonyms: CCDC2; CMG-1; CMG1

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC212777).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_001099222

ORF Size: 1800 bp

CMG1 (IFT74) (NM_001099222) Human Tagged Lenti ORF Clone - RC212777L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: NM 001099222.1

 RefSeq Size:
 2183 bp

 RefSeq ORF:
 1803 bp

 Locus ID:
 80173

 UniProt ID:
 Q96LB3

 Cytogenetics:
 9p21.2

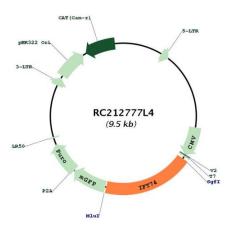

MW: 69.1 kDa

Gene Summary: This gene encodes a core intraflagellar transport (IFT) protein which belongs to a multi-

protein complex involved in the transport of ciliary proteins along axonemal microtubules. IFT proteins are found at the base of the cilium as well as inside the cilium, where they assemble into long arrays between the ciliary base and tip. This protein, together with intraflagellar transport protein 81, binds and transports tubulin within cilia and is required for ciliogenesis. Naturally occurring mutations in this gene are associated with amyotrophic lateral sclerosis-frontotemporal dementia and Bardet-Biedl Syndrome. [provided by RefSeq, Mar 2017]
