Dystrobrevin beta (DTNB) (NM 021907) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: Dystrobrevin beta (DTNB) (NM_021907) Human Tagged ORF Clone Lentiviral Particle

Symbol: Dystrobrevin beta

Mammalian Cell

Selection:

Puromycin

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

Tag: Myc-DDK

ACCN: NM_021907

ORF Size: 1881 bp

ORF Nucleotide

Sequence:

The ORF insert of this clone is exactly the same as(RC212783).

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 021907.3</u>, <u>NP 068707.1</u>

 RefSeq Size:
 2496 bp

 RefSeq ORF:
 1884 bp

 Locus ID:
 1838

 UniProt ID:
 060941

 UniProt ID:
 O60941

 Cytogenetics:
 2p23.3

 Domains:
 ZnF_ZZ

 MW:
 71.2 kDa

Dystrobrevin beta (DTNB) (NM_021907) Human Tagged ORF Clone Lentiviral Particle – RC212783L3V

Gene Summary:

This gene encodes dystrobrevin beta, a component of the dystrophin-associated protein complex (DPC). The DPC consists of dystrophin and several integral and peripheral membrane proteins, including dystroglycans, sarcoglycans, syntrophins and dystrobrevin alpha and beta. The DPC localizes to the sarcolemma and its disruption is associated with various forms of muscular dystrophy. Dystrobrevin beta is thought to interact with syntrophin and the DP71 short form of dystrophin. [provided by RefSeq, Mar 2016]
