## PCPTP1 (PTPRR) (NM 002849) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** PCPTP1 (PTPRR) (NM\_002849) Human Tagged ORF Clone Lentiviral Particle

Symbol:

EC-PTP; PCPTP1; PTP-SL; PTPBR7; PTPRQ Synonyms:

**Mammalian Cell** 

Selection:

Puromycin

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

Tag: Myc-DDK NM 002849 ACCN:

**ORF Size:** 1971 bp

OTI Disclaimer:

Cytogenetics:

**ORF Nucleotide** 

Sequence:

The ORF insert of this clone is exactly the same as(RC212896).

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through

naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: NM 002849.2, NP 002840.1

12q15

RefSeq Size: 3492 bp RefSeq ORF: 1974 bp Locus ID: 5801 Q15256 **UniProt ID:** 

**Domains:** Y\_phosphatase, PTPc\_motif

**Protein Families:** Druggable Genome, Phosphatase, Transmembrane

## PCPTP1 (PTPRR) (NM\_002849) Human Tagged ORF Clone Lentiviral Particle - RC212896L3V

**Protein Pathways:** MAPK signaling pathway

**MW:** 73.86 kDa

**Gene Summary:** The protein encoded by this gene is a member of the protein tyrosine phosphatase (PTP)

family. PTPs are known to be signaling molecules that regulate a variety of cellular processes including cell growth, differentiation, mitotic cycle, and oncogenic transformation. This PTP possesses an extracellular region, a single transmembrane region, and a single intracellular catalytic domain, and thus represents a receptor-type PTP. Silencing of this gene has been associated with colorectal cancer. Multiple transcript variants encoding different isoforms have been found for this gene. This gene shares a symbol (PTPRQ) with another gene, protein

tyrosine phosphatase, receptor type, Q (GeneID 374462), which is also located on

chromosome 12. [provided by RefSeq, May 2011]
