OTI Disclaimer:

Sequence:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

AGXT (NM_000030) Human Tagged ORF Clone Lentiviral Particle - RC212899L3V

Protein Pathways: Alanine, aspartate and glutamate metabolism, Glycine, serine and threonine metabolism,

Metabolic pathways

MW: 43 kDa

Gene Summary: This gene is expressed only in the liver and the encoded protein is localized mostly in the

peroxisomes, where it is involved in glyoxylate detoxification. Mutations in this gene, some of which alter subcellular targetting, have been associated with type I primary hyperoxaluria.
