DEDD (NM_032998) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: DEDD (NM_032998) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: DEDD

Synonyms: CASP8IP1; DEDD1; DEFT; FLDED1; KE05

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC212926).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_032998

ORF Size: 954 bp

DEDD (NM_032998) Human Tagged Lenti ORF Clone - RC212926L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 032998.1</u>

 RefSeq Size:
 2261 bp

 RefSeq ORF:
 957 bp

 Locus ID:
 9191

 UniProt ID:
 075618

Cytogenetics: 1q23.3

Protein Families: Druggable Genome, Transcription Factors

MW: 36.6 kDa

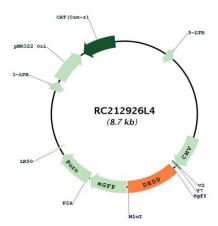

Gene Summary: This gene encodes a protein that contains a death effector domain (DED). DED is a protein-

protein interaction domain shared by adaptors, regulators and executors of the programmed cell death pathway. Overexpression of this gene was shown to induce weak apoptosis. Upon stimulation, this protein was found to translocate from cytoplasm to nucleus and colocalize with UBTF, a basal factor required for RNA polymerase I transcription, in the nucleolus. At least three transcript variants encoding the same protein have been found for this gene.
