Gene Summary:This gene encodes a member of the A-kinase anchoring protein (AKAP) family, a group of<br/>functionally related proteins that bind to a regulatory subunit (RII) of cAMP-dependent<br/>protein kinase A (PKA) and target the enzyme to specific subcellular compartments. AKAPs<br/>have a common RII-binding domain, but contain different targeting motifs responsible for<br/>directing PKA to distinct intracellular locations. Three alternatively spliced transcript variants<br/>encoding different isoforms have been described.[provided by RefSeq, Apr 2011]
